## Experiment-10

14/06/2021

### Create table

- 1) Create a view view1 from salesorder with (order number,order,date)

Create view view1 as select order\_number,order\_date from salesorder;

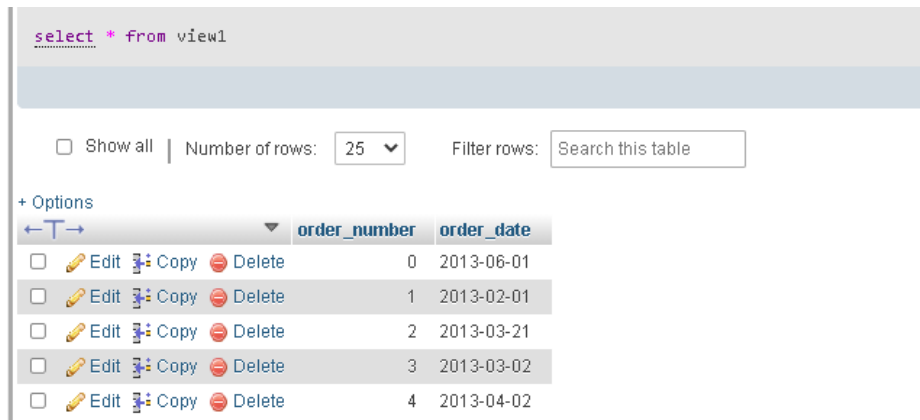

- 2) Describe the view view1

DESC view1;

- 3) Display values of view1

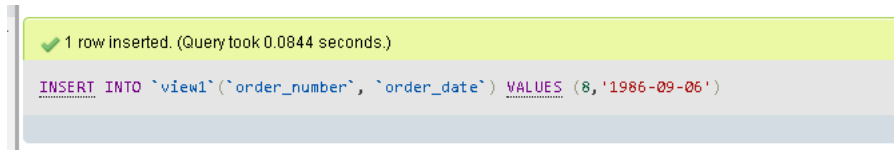

Select \* from view1;

	order_number	order_date
<input type="checkbox"/> Edit Copy Delete	0	2013-06-01
<input type="checkbox"/> Edit Copy Delete	1	2013-02-01
<input type="checkbox"/> Edit Copy Delete	2	2013-03-21
<input type="checkbox"/> Edit Copy Delete	3	2013-03-02
<input type="checkbox"/> Edit Copy Delete	4	2013-04-02

4) Insert one row of data in view1 and observe the output/error message.

INSERT INTO view1 (order\_number,order\_date) values (8,'1986-09-06');

1 row inserted. (Query took 0.0844 seconds.)
<pre>INSERT INTO `view1`(`order_number`, `order_date`) VALUES (8, '1986-09-06');</pre>

5) Create a view view2 from clientmaster(clientmaster,cname)

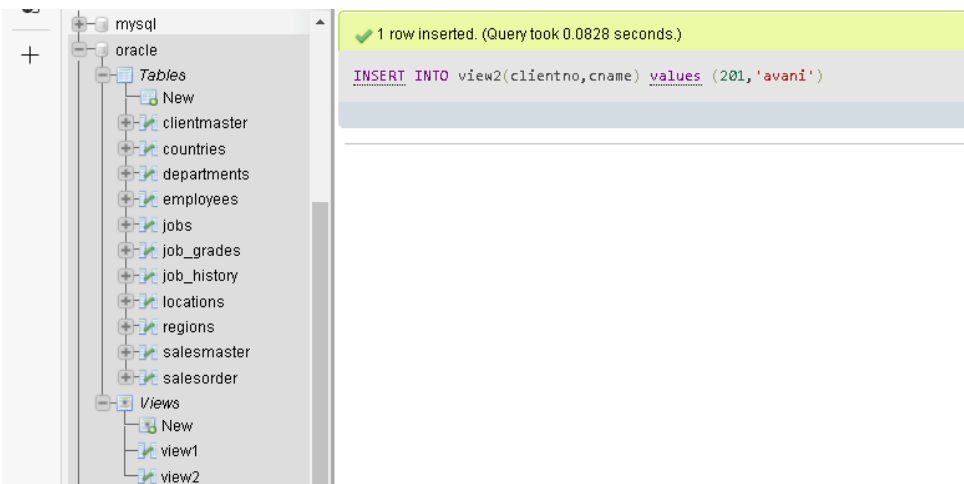

Create view view2 as select clientno,cname from clientmaster;

MySQL returned an empty result set (i.e. zero rows). (Query took 0.0555 seconds.)
<pre>create view view2 as select clientno,cname from clientmaster;</pre>

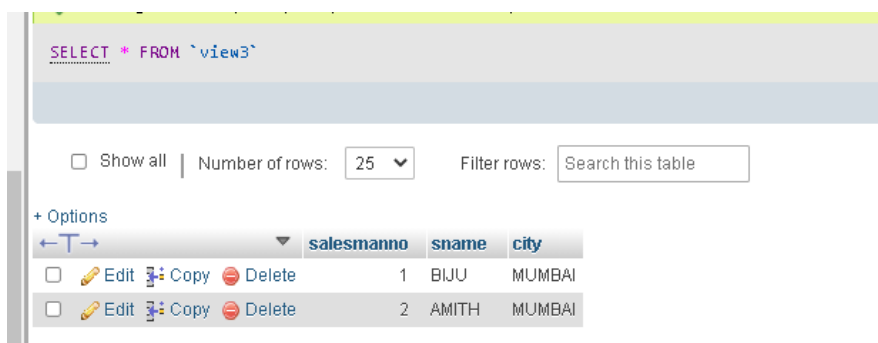

6) Insert one row of data in view2 and observe the output/error message.

INSERT INTO view2(clientno,cname) values (201,'avani');

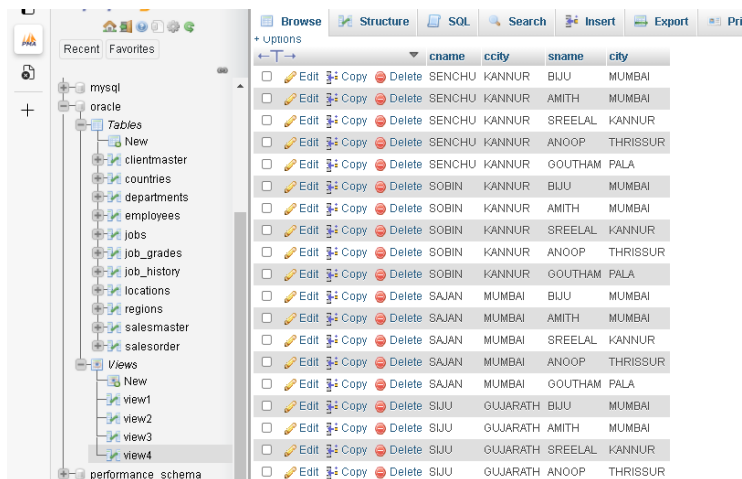

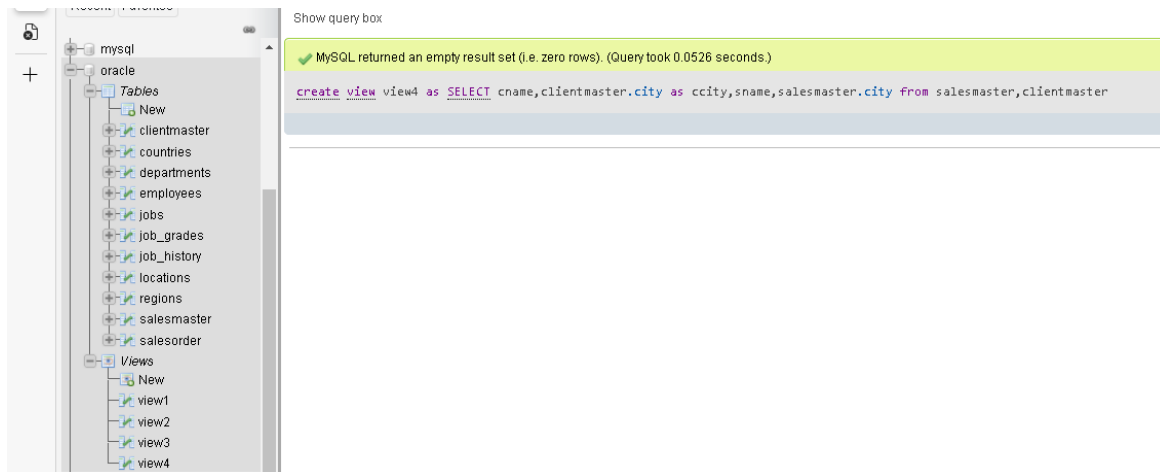

7) Create a view view3 from salesmaster with all columns with condition 'cit=mumbai'.

create view view3 as select salesmanno,sname,city FROM salesmaster where city='MUMBAI';

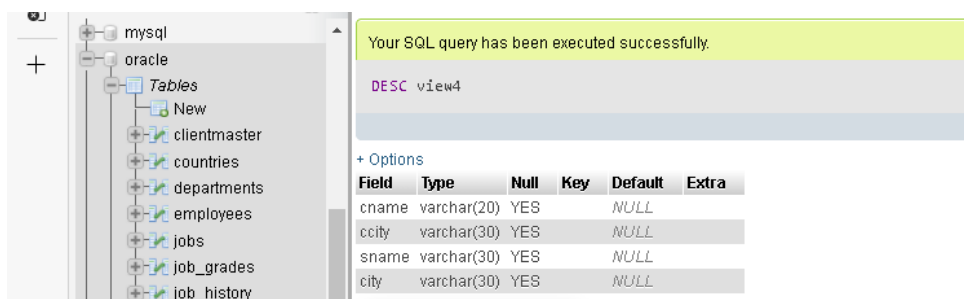

8) Create a view view4 from clientmaster and salesmaster with details(cname,city,sname,city)

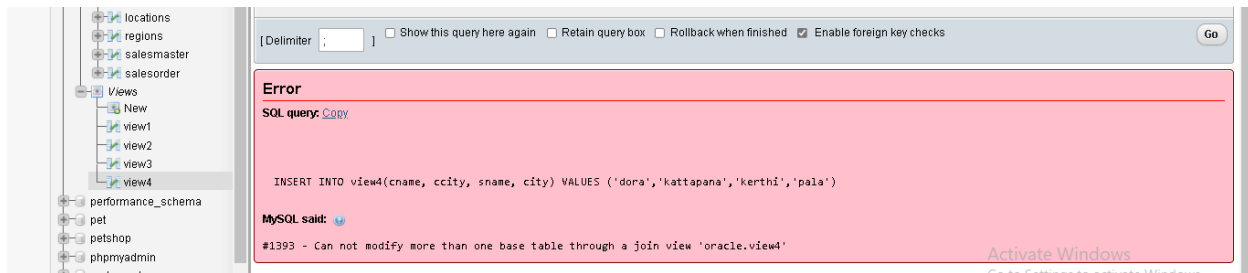

Create view view4 as select cname,clientmaster.city as ccity,sname,salesmaster.city from salesmaster,cilentmaster;

9) Describe view4.  
DESC view4;

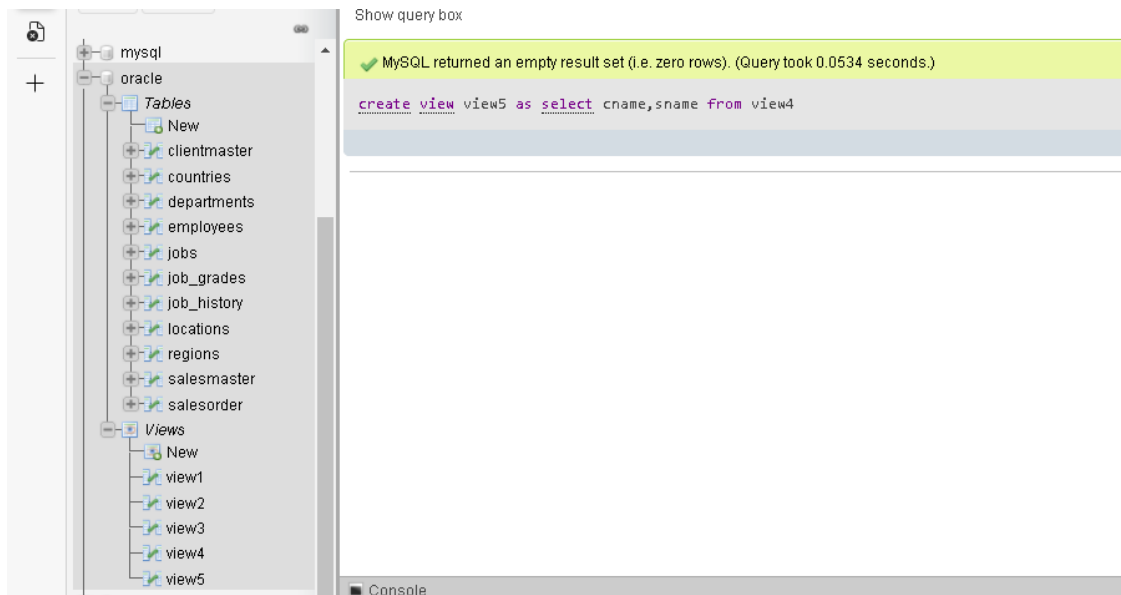

10) Insert one row of data in view4 and observe the output/error message

11) Create a view view5 from view4(cname.sname)

Create view view5 as select cname,sname from view4;

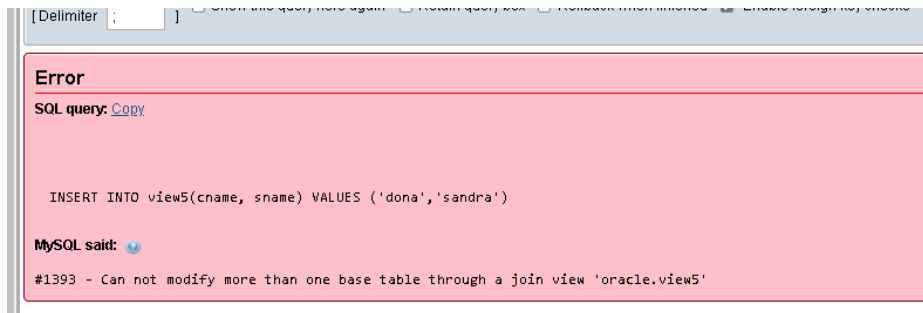

12) Describe view5

DESC view5;

13) Insert one row of data in view5 and observe the output/error message

#### 14) Delete the view4 table

Drop view view4;

#### 15) Delete the view5 table.

Drop view view5;

### Practice 10

#### Part1

- 1) The staff in the HR department wants to hide some of the data in the EMPLOYEES table. They want a view called EMPLOYEES\_VU based on the employee numbers, employee names and department numbers from the employees table. They want the heading for the employee name to be EMPLOYEE.

```
CREATE VIEW employees_vu AS (SELECT employee_id, last_names as employee, department_id
FROM employees);
```

ROWS: 25 First rows: Search this table

employee_id	employee	department_id
101	Kochhar	90
102	De haan	90
103	Hunlod	60
104	Ernst	60
107	Lorentz	60

- 2) Using your EMPLOYEES\_UV view, write a query for the HR department to display all employee names and department numbers.

```
SELECT employee,department_id FROM employees_vu;
```

+ Options	
employee	department_id
Kochhar	90
De haan	90
Hunlod	60
Ernst	60
Lorentz	60

- 3) Department 50 needs access to its employee data. Create a view named DEPT50 that contains the employee numbers, employee lastnames, and department numbers for all employee in department 50. You have been asked to label the view columns EMPNO, EMPLOYEE and DEPTNO. For security purpose do not allow an employee to be reassigned to another department through the view.

```
CREATE VIEW DEPT50 AS (SELECT employee_id AS EMPNO, last_name AS  
employee, department_id AS DEPTNO FROM employees where department_id=50);
```

mysql returned an empty result set (0 rows) (query took 0.0001 seconds)

```
CREATE VIEW DEPT50 AS (SELECT employee_id AS EMPNO, last_name AS employee, department_id AS DEPTNO FROM employees where department_id=50)
```

[Edit inline] [Edit] [Create PHP code]

- 4) Display the structure and content of DEPT50 view.

Desc dept50;

+ Options					
Field	Type	Null	Key	Default	Extra
EMPNO	decimal(6,0)	NO		<i>NULL</i>	
employee	varchar(25)	NO		<i>NULL</i>	
DEPTNO	decimal(4,0)	YES		<i>NULL</i>
